HUNG SON NGUYEN received the Ph.D. and D.Sci. (Habilitation) degrees, in 1997 and 2008, respectively. He is currently working as a Professor at the University of Warsaw. His main research interests include fundamentals and applications of rough set theory, data mining, text mining, bioinformatics, intelligent multiagent systems, soft computing, and pattern recognition. On these topics, he has published more than 150 research papers in edited books and international journals and conferences. He was involved in numerous research and commercial projects funded by the Polish government, by the EU and also by the Vietnamese government. He is a fellow of the International Rough Set Society, and a member of the Editorial Board of international journals, including Transactions on Rough Sets, ERCIM News, and Computational Intelligence. He has served as the Manager Editor of Fundamenta Informaticae (until 2017), Data Mining and Knowledge Discovery (2005–2008) and as the Program Co-Chair for RSCTC2006, RSKT2012, IJCRS2018, and CS&P2022. He has been also a PC Member for various other conferences.
